

APPENDIX I-1
CENTURY RESOURCES INC.
CONTAINMENT AREA AND SOIL SAMPLING PLAN

Containment Area and Soil Sampling Plan

Prior to decontamination of secondary containment areas, the areas will be inspected to identify any open cracks, gaps, spalling, or other areas in which the integrity of the secondary containment may have been breached. The containment areas to be inspected include the tank farms and truck loading pads.

Containment areas will be sampled following decontamination to determine the effectiveness of decontamination procedures and when the closure performance standard has been achieved.

Table I-1 identifies the parameters for which samples will be analyzed and provides analytical methods and detection limits for these parameters. Quality assurance/quality control procedures will be followed in accordance with EPA SW-846, "Test Methods for Evaluating Solid Waste," Third Edition, November 1986. The analytical parameters selected for sampling represent the typical hazardous wastes that are treated at the Century Resources facility.

The secondary containment will be sampled to determine completeness of decontamination. The containment areas will be decontaminated as discussed in the closure procedures. Following decontamination, random sampling of the containment floors and sumps will be conducted. Sampling methods will be in accordance with the attached procedure from the attached pages from the Compendium of Superfund Field Operations Methods (EPA 540/P.87/001, Dec. '87).

Random wipe samples of the containment floor will be collected at a frequency of one per 400 square feet. Samples will be analyzed for the analytical parameters shown in Table I-1.

If analysis indicates concentrations of the hazardous constituents below the applicable performance standard, no additional decontamination will be conducted. If a hazardous constituent is detected above these concentrations, then additional decontamination and verification analysis steps may be undertaken.

Soil cleanup target levels for contaminated areas will be negotiated with IEPA at the time of closure. The negotiated levels will be based on current IEPA toxicology information and intake assumptions. If the concentrations of the soil samples do not exceed the negotiated levels, then it will be considered clean-closed. Therefore, no further sampling will be necessary.

If, however, the initial sampling indicates that the negotiated cleanup levels have been exceeded, then further sampling will be necessary. A second round of grab samples will be taken at a depth of 12 to 18 inches at the same locations as the original samples that were found to be contaminated. Two additional soil samples will be collected approximately 3 feet from each original sample that was contaminated. The samples will be obtained between depths of 12 and 18 inches below the soil surface. These samples will also be analyzed for the parameters in Table I-1. The results of the second sampling round will determine the necessity for further sampling to evaluate the full extent of the contaminant release.

Once the full extent of any contaminant release to the soils has been determined, contaminated soils will be removed using a backhoe and transported to a temporary staging area using a front-end loader. The contaminated soils will be transported in covered dump trucks or placed in DOT-approved metal drums and properly manifested to an off-site RCRA-permitted hazardous waste management facility. The contaminated areas will then be regraded with clean soil.

Any contaminated materials removed will be shipped to an approved off-site hazardous waste management facility. A diked asphalt pad will be constructed and used as a temporary staging area during closure if required. The dike encircling the pad will be adequate to prevent run-on/run-off to and from the removed materials during precipitation events. Contaminated soils will be covered with plastic sheeting during temporary storage on the pad. After closure is completed, the pad will be removed using a backhoe. The pad rubble will be transported in covered dump trucks to an off-site approved hazardous waste management facility. The shipments will be properly manifested.

All equipment (such as the backhoe, shovels and front-end loader) used in the sampling and removal activities will be decontaminated. The backhoe and front-end loader will be surface decontaminated using an excess of decontamination solution. Rinsate from the decontamination operations will be collected in drums or a tank truck and transported to an off-site approved hazardous waste management facility.

All operations during the removal/decontamination and sampling activities of closure will be performed according to OSHA regulations for hazardous waste operations (29 CFR 1910.120).

TABLE I-1

ANALYTICAL PARAMETERS/METHODS FOR CLEAN CLOSURE
DETERMINATION

<u>Parameter</u>	<u>Preparation*</u>	<u>Analysis*</u>	<u>Detection Limits (mg/L, mg/kg)**</u>
A. PRIORITY POLLUTANT METALS			
(1) Arsenic	3000	7061	0.02
(2) Cadmium	3005	7130	0.05
(3) Chromium	3005	7190	0.50
(4) Copper	3005	7210	0.20
(5) Lead	3005	7420	0.01
(6) Mercury	3005	7470	0.002
(7) Nickel	3005	7520	0.40
B. VOLATILE ORGANIC COMPOUNDS	8240	8240	0.005-0.100
C. SEMI-VOLATILE ORGANIC COMPOUNDS	8270	8270	0.010-0.050

* The test methods referenced are from EPA SW-846, "Test Methods for Evaluating Solid Waste," Third Edition, November 1986.

** Detection Limits are based on published PQL's for that method, but may vary due by sample matrix due to analytical interferences.

APPENDIX I-2
CENTURY RESOURCES INC.
CLOSURE COST ESTIMATES

CLOSURE COST ESTIMATE

The closure cost estimate given below is based on final closure for the entire facility and removal of the maximum inventory of wastes. All costs are based on work being performed by a third party and off-site treatment or disposal of all wastes, residues and rinsate generated during closure. Salvage value for tanks or other equipment has not been included in the estimate. However, costs for dismantling and removing such equipment has been included in the estimate. All item costs have been rounded to the nearest dollar.

The closure cost estimate will be adjusted annually for inflation in accordance with 35 IAC 725.242. A copy of the current estimate will be maintained at the facility.

Appendix B

APPENDIX B
CLOSURE CERTIFICATION

ATTACHMENT C

This statement is to be completed by both the responsible officer and by the registered professional engineer upon completion of closure. Submit one copy of the certification with original signatures and three additional copies.

Closure Certification Statement

The hazardous waste management at the facility described in this document been closed in accordance with the specifications in the approved closure plan. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.
